DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group II, claims 30-38, in the reply filed on April 18, 2005, is acknowledged.

2. Claims 1-29, and 39-40, are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 18, 2005.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 30-38, are rejected under 35 U.S.C. 102(e) as being anticipated by U. S. Patent Application Publication No. 2005/0100683 (Fukiage et al).

Fukiage, in [0042], and [0069], disclose a method of reducing photoresist poisoning (reducing photoresist footing) in a chemically amplified photoresist (CAR photoresist produces acid upon exposure) by performing a plasma treatment on the underlying surface of the substrate (substrate coated with a TERA layer is plasma

treated, controlling the composition of the TERA layer) (claim 30). Fukiage, in [0069], and [0070], discloses that the plasma process performed on the underlying layer (layer beneath the photoresist) uses an RF source that operates in a power range, and operates in a frequency range (more than one frequency) (claim 31). Fukiage, in [0037], [0046], [0049], [0053], [0058], [0061], [0069], [0084], discloses that the substrate underlying the photoresist is a dielectric ARC (DARC) (see figure 2C, references 230, 240, and 250), wherein the DARC is either a silicon-containing antireflecting coating (inorganic, silicon precursor) or an organic DARC, and that the plasma process performed on the antireflective coating (TERA) uses a hydrogen containing gas and/or a helium gas (claims 32-38).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daborah Chacko-Davis whose telephone number is (571) 272-1380. The examiner can normally be reached on M-F 9:30 - 6:00. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark F Huff can be reached on (571) 272-1385. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For
